

Create a step-by-step application process for an Automated Costing System to be developed in ZOH Creator.

Let Say,

An Order is Raised for the **Fabric Code - B70001**. It has three Variant types (Premium, Value, Eco). Below are the Variant Rate/ Sq.Ft:

Variant Name	Rate per Sq. Ft
Eco	Rs. 60/-
Value	Rs. 65/-
Premium	Rs. 70/-

The Total Fabric Consumption is 150 SQM.

The Client has a Job Requirement of Fabric with additional services like fabric-design, cutting & welding.

Services	Cost per Sq.Ft
Fabric-Design	Rs. 10/-
Cutting	Rs. 5/-
Welding	Rs. 10/-

Output Columns Required:

Fabric	Variants	Job Requirement	Premium	Value	Eco
B70001	Premium, Value, Eco	Design, Cutting, Welding	xxxx	xxxx	xxxx

Build the deluge code with step-by-step calculation process and share as a document file with detailed working explanation of the system process.

Overview:

Our Products has different variants and thus we require variant costing for each product. The system should calculate the total cost based on the variant selected and the fabric consumption specified, providing accurate costing information for each order.

Key Features must have in Costing System:

- **Variant Management:** The system allows the user to define and manage different product variants, like Premium, Value, Eco. For each variant, the system should store the respective price per square foot.
- **Cost Calculation:** The system should calculate the total cost of each order based on the selected variant and the fabric consumption provided. The cost calculation should be derived by multiplying the fabric consumption by the respective price per square foot for the chosen variant.
- **Reporting:** The system should provide reporting capabilities to generate cost summaries for different orders. This can include displaying the total cost for each order, as well as aggregating costs by variant, order date, or other relevant criteria.
- **Customization:** The system should allow for easy customization of variant names, prices, and other relevant parameters, as well as the ability to add or remove variants as needed.
