

■ Salesforce Formula Field Cheat Sheet

Designed for maximum retention & curiosity — learn in context, not isolation.

1■■ Foundations — The DNA of Every Formula

- Field References: `Amount`, `Account.Name`, `CreatedDate`
- Operators: `+`, `-`, `\*`, `/`, `^`, `=`, `<>`, `<`, `>`, `<=`, `>=`
- Logic: `AND()`, `OR()`, `NOT()`
- Text Join: `&` → Example: `Hi ` & `FirstName`

2■■ Text Alchemy — Working Magic with Words

- `CONCAT()`, `LEFT()`, `RIGHT()`, `LEN()`, `UPPER()`, `LOWER()`
- `CONTAINS(text, compare\_text)`, `BEGINS(text, compare\_text)`
- `TEXT()` → Converts picklist/date/number to text
- ■ Tip: Text formulas build clean UI labels and alerts!

3■■ Numbers & Math — The Analyst's Toolkit

- `ROUND(number, digits)`, `ABS()`, `MOD()`, `SQRT()`, `CEILING()`, `FLOOR()`
- `MIN()` / `MAX()` → Compare multiple values easily
- ■ Combine with logic: `IF(Amount > MAX(Target, 5000), 'High', 'Low')`

4■■ Dates & Time — Your Temporal Superpowers

- `TODAY()`, `NOW()`, `DATE(year, month, day)`
- `YEAR()`, `MONTH()`, `DAY()`, `ADDMONTHS()`
- `DATEVALUE(datetime)` & `DATETIMEVALUE(text)`
- ■ Tip: Use with `TEXT()` for human-readable SLA or age fields.

5■■ Logic & Decision Flow — Make the Formula Think

- `IF(condition, true, false)` — Conditional logic core
- `CASE()` — Multi-branch decisions like switch statements
- `BLANKVALUE()`, `ISBLANK()`, `ISPICKVAL()`
- `TEXT()` → Essential for comparing picklist values
- ■■ Combine nested IFs to simulate decision trees.

6■■ Cross-Object References — Connect the Dots

- Access parent fields: `Account.AnnualRevenue` on Opportunity
- Use globals: `\$User.Name`, `\$Profile.Name`, `\$Organization.Name`
- ■ Great for formulas that adapt to user or record context.

7■■ Advanced Spells — Power User Zone

- `VLOOKUP()` → Pull data across objects (rare, but powerful)
- `HYPERLINK(url, label)` → Create clickable links
- `IMAGE(url, alt, height, width)` → Display visuals
- `PRIORVALUE(field)` → Compare before/after updates
- ■ These drive validation, automation, and reporting tricks.

8■■ Syntax Wisdom — The Jedi Rules

- Text in quotes → `Hello`, fields not → `Amount`
- Boolean → `TRUE`, `FALSE` (case-sensitive!)
- Parentheses always matter: `IF((A OR B) AND C, ...)`
- No comments allowed — use naming and spacing wisely.

■ Retention Tip — Think in Layers

- 1■■ Master field and operator basics first.
- 2■■ Add logic next (IF, CASE).
- 3■■ Combine with text/date functions for insights.
- 4■■ Finally, explore cross-object and advanced magic.
